Morningstar Investment Management considers Alternatives/Other to be 50% Growth / 50% Defensive assets.

About Morningstar Investment Management Australia

Morningstar Investment Management Australia is a global leader in asset allocation and multi-asset portfolio construction.

Morningstar's long-term, valuation-driven approach is underpinned by an emphasis on preserving capital and undertaking fundamental analysis of global asset classes and securities. We invest with the client in mind, delivering holistic and cost-effective investment solutions, helping them to meet their investment goals.

At a glance

- Yields on Australian and (to a lesser extent) global bonds have soared over the last couple of months, given expectations around rising inflation and anticipation that the U.S. Federal Reserve ('the Fed') will begin to wind back its stimulus program earlier than expected.
- This sees Australian bonds increasingly appeal, especially relative to cash, and we have made a notable increase in our investment in this asset class.

Portfolio action

We have increased our allocation to Australian bonds in the portfolio, funded from cash:

Security	Security/ APIR Code	Current Weighting	New Weighting	Increase / Decrease
iShares Core Composite Bond ETF	IAF-AU	14.7%	16.2%	1.5%
iShares Core Cash ETF	BILL-AU	13.4%	11.9%	-1.5%

Rationale

While much investor attention is understandably focused on global sharemarkets, it has been an equally fascinating chapter for bond markets, with bond yields fluctuating (at times, wildly) throughout this COVID-19 period. This, in itself, is not uncommon – the path of an economic recovery is rarely smooth – but the speed and magnitude of these gyrations has been simply extraordinary, as investors attempt to navigate this ever-changing environment.

More recently, bond yields have moved sharply higher, with the Australia Government 10-year bond yield breaking through 2% in late October. In part, this reflects investors adjusting to the reality of higher inflation, which has been exacerbated by the recent spike in energy prices. However, investors have also had to prepare for the U.S. Federal Reserve beginning to unwind the massive stimulus program that has underpinned this economic recovery (and the associated sharemarket rally) to date. Remember that bond prices fall as yields rise, and vice versa, all things being equal, and so the recent rise in bond yields has seen rare losses in key bond markets.

Bonds typically fulfil two functions in a diversified portfolio. Firstly, they provide investors with a source of income and, secondly, they typically diversify sharemarket exposure (thereby helping to preserve capital in uncertain times, generally speaking). Following the recent improvement in bond yields, Australian bonds now represent much better value, in our view. Said another way, we are much more confident in their ability to deliver income and diversification benefits to the portfolio at current valuations, and we have increased our allocation accordingly.

More broadly, it may be helpful to consider this trade in the context of how we have actively responded to the changing opportunities in this asset class over 2021. As you can see from the chart below, the relative volatility in this asset class has provided a fantastic opportunity for nimble investors to take advantage of better yields (and to, conversely, hold a lower, or different, allocation to bonds when it makes sense to do).
